

# Automatically Restart byREQUEST in Publishing Mode

The following instructions illustrate how to setup the byREQUEST application to automatically restart byREQUEST in Publishing Mode.

**Note:** byREQUEST is a 32-bit application that runs as a program, not a service. The byREQUEST user account will need to be automatically logged in with an active session. (See additional Note below.)

1. Right click on the byREQUEST desktop icon and select 'copy.'
2. Click the Start button (in the bottom left of the taskbar) and select All Programs. Right click the Startup folder, and then click Open.
3. In the Startup folder, right-click and 'Paste' the byREQUEST shortcut.
4. Right-click the byREQUEST shortcut icon, and select 'Properties'.
5. Click the Shortcut tab, in the Target field move your cursor to the end of what currently appears here. Add a space after the last quotation " and then type: **/publish**
6. Click OK to accept the changes.

### **NOTE:**

The steps above will *only* restart byREQUEST when you are actively logged into the byREQUEST user account and not when the computer is rebooted. If you want byREQUEST to automatically restart in publishing mode upon a reboot of the machine, you will also need to configure the byREQUEST user account to log on automatically.

#### **Windows 7 and Windows 10 instructions:**

<https://technet.microsoft.com/en-us/magazine/ee872306.aspx>

#### **Server 2008 R2, Server 2012 and Server 2016 instructions:**

There is a program named 'autologon.exe' from Microsoft that will automatically log on a user when the Server system reboots. The program can be downloaded from <https://technet.microsoft.com/en-us/sysinternals/bb963905>

Once configured the user account can then have byREQUEST automatically start in publishing mode as per the step-by-step instructions noted above.
