

Cross Platform System Monitoring

NIGHTWATCH®

Automated Monitoring and Alerting System
for Servers, Applications, Environments and Networks

Monitor critical software applications, web servers, mail servers, hardware and the environment too! Alerts arrive by pager, email, snmp, syslog or the web.

Nightwatch® provides 24 by 7 system monitoring and event notification to satisfied customers worldwide. With a reputation built on reliability and cost effectiveness, Nightwatch® monitors critical applications, software, events, hardware, servers and computer room environments.

In today's competitive marketplace - monitoring and maintaining web sites, applications, servers and all internal and distributed systems is critical. Virtually all successful companies need a cost effective, easy to use monitoring system to eliminate down time and critical system failure.

Alerting technical support staffs of potential issues before users or customers encounter problems not only dramatically increases customer satisfaction but also increases the productivity of your technical groups and eliminates additional support costs.

As an integrated network event monitoring solution, Nightwatch® utilizes a variety of failsafe notification options designed to meet all of your monitoring and notification requirements. In addition, Nightwatch® is "server-friendly", seamlessly working with any server or any operating system for true cross platform system monitoring.

Nightwatch® is the leading solution for monitoring every aspect of your entire enterprise from a single, web-enabled console.

Nightwatch® Benefits:

Automatically monitor software and hardware events, even before problems occur - Immediately notify your support staff of existing problems or the detection of potential problems

Error recovery, corrective actions - Upon notification of a failure or problem, Nightwatch® can automatically attempt to correct a problem, restart a procedure or even "reboot" a server.

Multiple notification options - When a problem or failure has been detected, Nightwatch® can be configured to notify your support staff by pager, cell phone, email or network broadcast popup messages. Nightwatch knows when to raise an alarm and whom to alert.

Increase user and customer satisfaction - Maintain high levels of uptime on both internal or distributed systems. Alert your support staff immediately of problems or better yet, alert them before your users or customers experience problems.

Easy to deploy, low maintenance - Nightwatch® is modular by design. Optional hardware and software components allow you to quickly and easily set-up your enterprise. Nightwatch® installs in just 5 minutes. In less than 30 minutes you can begin monitoring the critical events most important to you.

NIGHTWATCH®
Installs in 5 minutes!
You can be monitoring
important events in
your enterprise in less
than 30 minutes!

Call and we'll show
you how!
